

# FIRETRACKER FT128 FIRE ALARM SYSTEM QUICK OPERATION GUIDE

Normal  
Condition –  
Green LED  
illuminated

To operate the panel:

Start from the top  
button and work down  
using these four  
buttons

## 1 - TO SILENCE PANEL BUZZER:

Press  Button **once** to silence panel buzzer.

**Caution.** Pressing the  Button again will cause the buzzer to resound.

## 2 - TO SILENCE ALARM DEVICES:

Press  Button **once** to silence all alarm devices, sounders or Occupant Warning System (OWS) and wait for a few seconds.

**Caution.** Pressing the  Button again will cause the alarms to resound.

## 3 - TO RESET FIRE ALARM:

**IMPORTANT: Alarm devices must be silenced before pressing “Reset” button.**

Press and hold the  Button for 1 second until the Fire Alarm Panel starts its reset sequence. The system will now automatically reset all alarms.

**Alarms may re-trigger in the system if the alarm condition is still present. Wait for 30 seconds and try again.**

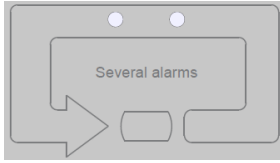

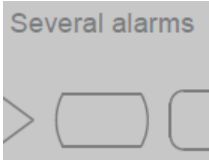

## 4 - TO DISABLE (ISOLATE) AN ACTIVE ALARM:

**IMPORTANT: Alarm devices must be silenced before pressing “Disable” button.**

Press  Button to isolate device in alarm – system will now illuminate the  LED. This zone / address point will remain disabled until manual re-enabled via Menu H2/B6 button.

## 5 - TO DISPLAY MORE THAN ONE ALARM :

When the **Alarms queued** red LED's are illuminated . Press the  Button to see the additional Alarms.

## 6 - TO MANUALLY DISABLE (ISOLATE) AN ALARM POINT FROM THE MENU:

1. Press  button.
2. Key Enter Access Code.
3. Scroll to the **Disable or re-enable** menu (H2) by pressing  or  button/s then press  to Accept
  - a. **DISABLE SINGLE POINT**
    - i. Scroll to the **Disable address** menu (B2) by pressing  or  button/s then press  to Accept.
    - ii. Type in the address number as required, then press  to Accept.
  - b. **DISABLE WHOLE ZONE**
    - i. Scroll to the **Disable zone** menu (B1) by pressing  or  button/s then press  to Accept.
    - ii. Type in the address number as required, then press  to Accept.
4. When prompted with “Re-enable time”:
  - a. If re-enable time not required, use scroll buttons  or  to highlight **No** then press to  Accept.
  - b. If required, key in the time in hours:minutes (default is current time + 3 Hours), scroll highlight to **Yes** then press to  Accept.
5. Press the  Button repeatedly until the menu returns to the date / time screen.

## 7 - TO MANUALLY RE-ENABLE AN ALARM POINT FROM THE MENU:

1. Press  Button.
2. Key Enter Access Code.
3. Scroll to the **Disable or re-enable** menu (**H2**) by pressing  or  button/s then press  to Accept
  - a. **RE-ENABLE SINGLE POINT**
    - i Scroll to the **Re-enable address** menu (**B5**) by pressing  or  button/s then press  to Accept.
    - ii The disabled address will be displayed or type address number as required, then press  to Accept
  - b. **RE-ENABLE WHOLE ZONE**
    - iii Scroll to the **Re-Enable zone** menu (**B6**) by pressing  or  button/s then press  to Accept.
    - iv The disabled zone will be displayed or type in the zone number as required, then press  to Accept
4. Press the  Button repeatedly until the menu returns to the date / time screen. +

## 8 - TO CHECK EVENT LOG:

1. Press  Button.
2. Key Enter Access Code.
3. Scroll to the **Present System Status** menu (**H4**) by pressing  or  Button/s then press  to Accept
4. Scroll to **Disablement** menu (**U1**) by pressing  or  Button/s then press  to Accept
5. Scroll to **Event Log** menu (**U6**) by pressing  or  Button/s then press  to Accept
6. Select event Log: 0=Alarm, 1=Interlocking, 2=General, then press  to Accept.  
The most recent event is shown in the top of the list

## 9 – CHECK THE CURRENT SOFTWARE VERSION OF THE MAINBOARD

1. Press  Button.
2. Key Enter Access Code.
3. Scroll to the **Present System Status** menu (**H4**) by pressing  or  Button/s then press  to Accept
4. Scroll to **Version and Alarm Counter** (U7) by pressing  or  Button/s then press  to Accept
5. Press the  Button repeatedly until the menu returns to the date / time screen.

## 10 – TO ACKNOWLEDGE FAULT

1. Press  Button.
2. Key Enter Access Code.
3. Scroll to the **Acknowledge Fault** menu (H6) by pressing  or  Button/s then press  to Accept
4. Scroll to check the list of faults by pressing  or  Button/s then press  to Access the fault.
5. Scroll to Fault Acknowledge (P6) by pressing  or  Button/s then press  to Accept. The status for that fault is now Acknowledged. When this fault is corrected it will be removed from the list.
6. Press the  Button repeatedly until the menu returns to the date / time screen.

## 11 – TO CHECK FAULTS INFORMATION

1. **Refer to Operation Manual FT128 Rev 2.4**, check for the fault and resolution process.

## **12 – EBLWin SOFTWARE INSTALLATION to PC**

1. **Refer to Operation Manual FT128 Rev 2.4, PAGE 75.**
2. Needed Hardware
  - a. EBLWin key 5094
  - b. Null modem serial cable
  - c. USB to Serial Converter to USB adapter
  - d. Laptop with Win7 - Win10

## **13 – OPERATION MANUAL FT128 Rev 2.4**
