

End of Life Notice

FireTracker FT128 Fire Detection Control & Indicating Equipment

Overview

This Technical Bulletin (TB216) formally advises that the FireTracker FT128 Fire Detection Control & Indicating Equipment (FDCIE) has reached **End of Life (EOL)** status.

After nearly 20 years of service, the decision to retire the FT128 is driven by increasing difficulty in sourcing critical components and the introduction of our next-generation platform: the FireTracker **FTOne** FDCIE. This newer generation provides improved functionality, enhanced usability, and ongoing compliance with current fire detection standards in line with natural product lifecycle progression.

Key Dates

End-of-Sale Date:

- **30 April 2025** – Last date to place orders for FT128 products.

End-of-Support:

- **FT128:** Technical support continues; spare parts subject to requirements and availability
- **FT128V2:** Technical support continues; spare parts subject to requirements and availability
- **FT12819:** Technical support continues; spare parts subject to availability

Recommended Migration Path

Customers to transition to the [FireTracker FTOne](#) or [FT1020G3](#) product ranges, which offer:

- Backward compatibility with existing field wiring and connected devices (where applicable)
- Advanced diagnostics and configuration tooling
- Modern platform architecture ensuring long-term service support

Upgrade Support

Our technical team is available to assist with:

- Upgrade and replacement planning
- System compatibility assessments
- Migration strategy development

This support aims to ensure a seamless and efficient transition.
